

As part of a road improvement project along Jalan Pudu, the government commissioned a drainage upgrade designed to withstand the constant traffic loads from heavy vehicles.

ACO Monoblock was chosen for its robust, one-piece construction and F900 load class rating, making it far more durable than conventional concrete drains, which are prone to early failure under such conditions. In addition to its strength, ACO Monoblock provides effective surface drainage, ensuring long-term performance in high-traffic urban environments.

Project Name	DBKL Tower 1 Roadside Drain
State of Installation	Kuala Lumpur
Country of Installation	Malaysia
Commissioning Date	2017
ACO Sales Organization	ACO Australia
Segment and Subsegment	Surface Water Management - Public Road
ACO Product	ACO Monoblock
